morphological signal and i - ntua - 74.2.3 morphological signal operators and nonlinear convolutions. in the 1970s, morphological operators were extended from binary to gray-level images and real-valued signals. going from sets to functions was made possible by using

set representations of signals and transforming these input sets via morphological set operations.

1 biomedical signal processing - userseu - biomedical signal processing aims at extracting significant information from biomedical signals. with the aid of biomedical signal processing, biologists can discover new biology and physicians can monitor distinct illnesses. decades ago, the primary focus of biomedical signal processing was on filtering signals to remove noise [1].

chapter 25 radar digital signal processing - jocolmanfo - radar digital signal processing 25.3 6x9 handbook / radar handbook / skolnik / 148547-3 / chapter 25 seen to be a combination of spectral components of the form $a e^{j2\pi ft}$. sampled signals have $t = nt$ with t a sampling interval and n an integer time, but sampled or not, the basic component form is the same.

digital signal processor fundamentals and system design - a) real-time digital signal processing capabilities. dsps typically have to process data in real time, i.e., the correctness of the operation depends heavily on the time when the data processing is completed. b) high throughput. dsps can sustain processing of high-speed streaming data, such as audio and multimedia data processing.

signal processing - ecetgers - chapter 4 focuses on fir filters and its purpose is to introduce two basic signal processing methods: block-by-block processing and sample-by-sample processing. in the block processing part, we discuss various approaches to convolution, transient and steady-state behavior of filters, and real-time processing on a block-by-block basis using
